SUMMARY

- Backend-focused full-stack engineer building production Node.js/TypeScript APIs, real-time systems (WebSockets), and SQL-backed services – with hands-on experience deploying Python AI services alongside them. Delivered JWT/RBAC-secured approval workflows and sub-200ms REST APIs for a live client platform. Codeforces Specialist, 800+ DSA problems solved.

EDUCATION

Indian Institute of Information Technology Ranchi

Bachelor of Technology in Computer Science and Engineering

2024 – 2028

CGPA: 8.74

EXPERIENCE

Freelance Full-Stack Developer – Client: Zidio Development

Remote

Built & delivered IntellMeet ([GitHub](#) | [Live Demo](#)), a real-time meeting collaboration platform

June 2026 – Aug 2026

- Implemented JWT auth with rotating refresh tokens, OTP login, and a server-enforced 4-tier RBAC approval flow (Guest/Member/Host/Admin), with REST endpoints averaging under 200ms p95 latency
- Engineered real-time chat and presence over WebSockets with sub-100ms latency, and optimized video join flow to under 3 seconds from "Join Now" to first frame
- Built an async pipeline (BullMQ, Redis, Llama 3 via Groq) generating meeting summaries, decisions, and action items for a 60-minute meeting in under 2 minutes, with retry-with-backoff and graceful fallback on API failure

PROJECTS

DocuParse AI – AI-Powered Document Extraction Platform – [GitHub](#) | [Live Demo](#)

June 2026

Python, FastAPI, PyTorch, LayoutLMv3, Node.js, Express, TypeScript, PostgreSQL, BullMQ, Redis, JWT

- Built a TypeScript/Node.js REST API layer with JWT auth and an async BullMQ/Redis job queue in front of a Python/FastAPI extraction microservice, decoupling ingestion from inference
- Integrated a fine-tuned LayoutLMv3 model (91%+ field-extraction accuracy on 949 documents) processing 20 documents/min end-to-end

PropPredict – Real Estate Price Prediction Platform – [GitHub](#) | [Live Demo](#)

May 2026

TypeScript, Python, FastAPI, Scikit-Learn, PostgreSQL, SQL, Docker Compose, REST API

- Designed a relational PostgreSQL schema and SQL logic behind 10+ RESTful endpoints; benchmarked 3 regression models (Linear Regression, Random Forest, Gradient Boosting) in a Python/FastAPI ML pipeline, selecting the best performer by R^2 score
- Containerized the full stack with Docker Compose for a one-command, reproducible deploy

REDLINE – AI Co-Driver for Driver Stress Detection (Hackathon) – [GitHub](#)

Aug 2026

Python, FastAPI, HuggingFace (Whisper, wav2vec2), TypeScript, React

- Led a 2-person team as backend lead at a 48-hour virtual hackathon, building a FastAPI service that transcribes live audio (Whisper) and cross-checks vocal-stress classification (wav2vec2) against transcript sentiment

TECHNICAL SKILLS

Backend & APIs: Node.js, TypeScript, Express.js, Python, FastAPI, REST API Design, WebSockets (Socket.io), JWT Authentication, RBAC, Async Job Queues (BullMQ/Redis), Microservices

Databases & SQL: PostgreSQL, MySQL, MongoDB, Relational Schema Design, SQL Query Writing

Languages: TypeScript, Python, JavaScript (ES6+), C++, Java, C, SQL

Tools & DevOps: Git, GitHub, GitHub Actions (CI/CD), Docker, Docker Compose, Postman, VS Code

Frontend: React.js, React 19, Next.js, Redux, Zustand, Tailwind CSS, TanStack Query, WebRTC

AI / ML (applied): PyTorch, HuggingFace Transformers, LayoutLMv3 (fine-tuning), Scikit-Learn, LLM API Integration (Groq/Llama 3)

Core Competencies: Data Structures & Algorithms, System Design, OOP, Unit/Integration Testing, Debugging

ACHIEVEMENTS & CERTIFICATIONS

- Built and deployed 6+ full-stack products with public GitHub repos and live demos
- Selected Participant, [Amazon ML Summer School 2026](#) – national program in applied machine learning and deep learning
- Codeforces Specialist (max rating 1421), Rank 298/29960 in Codeforces Round 1102 (Div 2); CodeChef 3-Star, Rank 213 in Starters 240B; LeetCode Knight (1932) – 800+ DSA problems solved
- Certificate of Completion, ["Complete Web Development Course"](#) (Hitesh Choudhary, Udemy) – 100 hours
