SUMMARY

- AI-native full-stack engineer who independently designs, ships, and deploys production web applications end-to-end – React/Next.js, TypeScript, Node.js, Python, FastAPI – with LLM-powered features, retrieval pipelines, and ML models integrated into live products. Comfortable building AI agents/workflows, REST APIs, and evaluating AI output quality, with strong CS fundamentals (Codeforces Specialist, 700+ DSA problems solved) and an AI-assisted development workflow (Cursor, Claude) that drives fast iteration from idea to live product.

EDUCATION

Indian Institute of Information Technology Ranchi

Bachelor of Technology in Computer Science and Engineering

2024 – 2028

CGPA: 8.74

PROJECTS

DocuParse AI – AI-Powered Document Extraction Platform – [GitHub](#) | [Live Demo](#)

June 2026

React 19, Node.js, Express, Python, FastAPI, PyTorch, LayoutLMv3, PostgreSQL, BullMQ, Redis, JWT

- Fine-tuned a LayoutLMv3 model on a custom-annotated dataset to reach 91%+ field-extraction accuracy, served via a FastAPI microservice as an end-to-end retrieval/extraction pipeline from raw document to structured output
- Built the full product experience – React 19 human-in-the-loop review UI, JWT-secured Node/Express REST API, and an async BullMQ/Redis job queue – keeping uploads and extraction reliable and evaluable under concurrent load

PropPredict – Real Estate Price Prediction Platform – [GitHub](#) | [Live Demo](#)

May 2026

React, TypeScript, Python, FastAPI, Scikit-Learn, PostgreSQL, Docker Compose, REST API

- Shipped a responsive React + TypeScript product with role-based UX for 3 user types (Buyer, Seller, Admin), backed by a FastAPI-served ML pipeline benchmarking multiple models for prediction accuracy, exposed via 10+ RESTful endpoints
- Containerized the full stack (frontend, backend, database) with Docker Compose for a reproducible, one-command deploy, taking the product from prototype to live demo independently

ChessPulse – Interactive Chess Web Application – [GitHub](#) | [Live Demo](#)

May 2026

React.js, TypeScript, Tailwind CSS, Vite, C++, REST API – Deployed on Vercel

- Built a fully responsive, cross-browser React + TypeScript single-page app with a custom C++ engine for AI opponents, across 2 game modes (1v1 and vs-AI) with real-time board sync
- Engineered the engine/frontend integration for sub-100ms move response and shipped an ELO-based rating system, iterating from playtesting feedback

Sorting Simulator – Algorithm Visualization Tool – [GitHub](#) | [Live Demo](#)

2026

React.js, Vite, TypeScript, JavaScript (ES6), HTML5, CSS3

- Implemented 5 sorting algorithms (Bubble, Selection, Insertion, Merge, Quick Sort) with a real-time, step-by-step animated visualizer
- Built a clean React + Vite interface with adjustable array size and animation speed to make time-complexity concepts intuitive

ACHIEVEMENTS & CERTIFICATIONS

- Independently designed, built, and deployed 6+ live full-stack products, each with public GitHub repos, documentation, and working demos – driven entirely by self-directed side projects, not coursework
- Selected Participant, Amazon ML Summer School 2026 – competitive national program in applied machine learning and deep learning
- Codeforces max rating 1421 (Specialist), CodeChef 3-Star, LeetCode Knight (2036) – 700+ DSA problems solved, reflecting strong CS fundamentals and problem-solving ability
- Certificate of Completion, "[Complete Web Development Course](#)" (Hitesh Choudhary, Udemy) – 100 hours, July 2026

TECHNICAL SKILLS

AI / LLM & Agent Workflows: LangChain, PyTorch, HuggingFace Transformers, LayoutLMv3 (fine-tuning), Scikit-Learn, LLM-powered feature development, RAG concepts, Prompt Engineering, AI-Native Tooling (Cursor, Claude, ChatGPT)

Languages: Python, TypeScript, JavaScript (ES6+), C++, Java, C, SQL

Frontend & Product: React.js, React 19, Next.js, Redux, Tailwind CSS, Vite, HTML5, CSS3, Responsive Web Design, TanStack Query, UI/UX to Code Conversion, Single Page Applications

Backend & APIs: Node.js, Express.js, FastAPI, REST API Design, JWT Authentication, Role-Based Access Control (RBAC), Async Job Queues (BullMQ/Redis), Microservices

Databases: PostgreSQL, MongoDB, MySQL, Database Design

Tools & DevOps: Git, GitHub, Docker, Docker Compose, CI/CD, Vercel, Postman, VS Code, Cross-Browser Testing & Debugging

Core Competencies: Data Structures & Algorithms, System Design, Object-Oriented Programming, Product Thinking, Rapid Prototyping & Iteration, Self-Directed Learning of New Codebases/Stacks, Clear Technical Communication
